

Towbar wiring kit with trailer turn light bulb failure detection module

Short description:

The wiring kit is designed for trailer electrical connection.

The trailer socket wiring harness with BCM02 module is a simple solution, dedicated for cars, in which the trailer socket can be connected directly to car electrical installation.

The wiring kit is provided for installation in older car models not equipped with electronic lamp drivers controlling load on driving outputs.

The wiring kit is also equipped with trailer turn light bulb failure detection module BCM02.

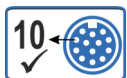

The detection of burned out bulb is indicated with sound signal.

Main features:

Interoperation with 13-pin trailer plug

Constant power supply of the caravan (pin 10 active)

Designed for mounting in vehicles with incandescent bulb

Interoperation with trailer incandescent bulbs or LED lamps

Switching fog light to trailer

Trailer turn indicator bulb failure sound alert

In order to check completely the connection of module you can use the tester, which is available in assortment of the company

The kit contents:

1. Wiring harness with rubber bushing;
2. BCM02 module central unit;
3. The 13+1 pin trailer socket with seal;
4. Mounting accessories.
